

Jerry Mander Goes to Work

Print this page and grab a pencil.

Your name is Jerry Mander and you're in charge of drawing the voting district boundaries for the tiny country of Corruptylvania. An election is coming up and current polls indicate that candidate Lucy LaVender is quite a bit more popular than her opponent, Gary Green.

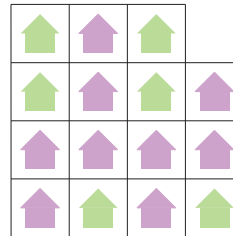

Meanwhile, you've received a substantial bribe to draw the boundaries to help Green win. You must divide Corruptylvania into districts of contiguous households, so that Gary Green will get most of the votes in a majority of the districts.

Example:

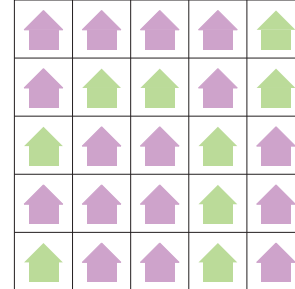

Green wins these two districts, thereby winning the election. (with a minority of the popular vote!)

Divide this region into three districts of equal area to help Green win.

Divide these regions into five districts of five households each to ensure Gary Green's Victory.

Divide this region into five districts of five households each to help Green win.
